EDUCATION

CLEMSON UNIVERSITY

M.S. IN ELECTRICAL ENGINEERING
 Dec 2020 | Clemson, SC
 GPA: 3.5 / 4.0

I.I.T. DELHI

MASTER OF TECHNOLOGY IN POWER SYSTEMS
 July 2013 | Delhi, India
 GPA: 8.754 / 10.0

IIEST SHIBPUR

BACHELOR OF ENGINEERING IN ELECTRICAL ENGINEERING
 April 2010 | West Bengal, India
 GPA: 79.07 %

COURSEWORK

GRADUATE

Power System Dynamics (EEL 797)
 Power System Transients (EEL 793)
 Power System Protection (ECE 824)
 Distribution System Engineering (ECE 816)
 Power System Optimization (EEL 896)
 Power System Analysis (EEL 791)
 Power System Restructuring & Deregulation (EEL 891)
 Flexible AC Transmission System (EEL 894)
 High Voltage DC Transmission (EEL 794)
 Digital Signal Processing (ECE 844)
 Advanced Nonlinear Control (ECE 874)
 Distributed Dynamical System (ECE 893)

SKILLS

PROGRAMMING

Python • MATLAB • \LaTeX • HTML
 • CSS • Quarto

SOFTWARE

RTDS/RSCAD • PSCAD • DigSILENT PowerFactory • MATLAB • PSS/E • MATLAB Simscape • PLECS
 • Visual Studio Code

ANALYTIC SKILLS

Probability and Statistics • Linear Algebra • Graph Theory • Optimization • Dynamical Systems • Numeric Computation

EXPERIENCE

SUZLON ENERGY LIMITED | DEPUTY MANAGER

Feb 2021 – Present | Pune, Maharashtra

- Grid code compliance assessment
- Simulation model development, validation and analysis of Wind Energy Systems
- Proficient in various data analysis, data visualization tools

CLEMSON UNIVERSITY | RESEARCH ASSISTANT

Aug 2013 – Dec 2019 | Clemson, SC

- Transient modeling of electromechanical, electromagnetic and power electronic energy systems (e.g. Photovoltaic, Gas-Turbine based DER, BESS etc.)
- Switching model and switching average model of power electronic converters
- Linear and non-linear controller design of microgrid systems
- Real time simulation of power electronic energy systems
- Virtual inertial scheme design and analysis of inverter
- Distribution system modeling and analysis in OpenDSS
- Phasor based dynamic modeling and analysis in PSS/E

ARGONNE NATIONAL LABORATORY | RESEARCH AIDE

May 2017 – Dec 2017 | Lemont, IL

- Dynamic phasor modeling of inverter bases DERs
- Electromagnetic modeling of inverter based DERs in PSCAD, MATLAB
- Model validation of dynamic phasor model with EMT model of switching averaged inverter

PUBLICATIONS

DYNAMIC STUDY OF VIRTUAL OSCILLATOR CONTROLLED INVERTER BASED DISTRIBUTED ENERGY SOURCE

EDUCATION

CLEMSON UNIVERSITY | M.S. IN ELECTRICAL ENGINEERING

Dec 2020 | Clemson, SC

GPA: 3.5 / 4.0

Thesis: Enhancement of inertial response of inverter based energy system and its application for dynamic performance improvement of a microgrid

Advisor: Dr. Ramtin Hadidi

I.I.T. DELHI | MASTER OF TECHNOLOGY IN POWER SYSTEMS

July 2013 | Delhi, India

GPA: 8.754 / 10.0

Thesis: Control of Inverter based Microgrid

Advisor: Dr. Sukumar Mishra

IEST SHIBPUR | BACHELOR OF ENGINEERING IN ELECTRICAL ENGINEERING

April 2010 | West Bengal, India

GPA: 79.07 %

PROJECTS

IMPROVED ADAPTIVE UNDER FREQUENCY LOAD SHEDDING SCHEME

Instructor: Dr. Ramtin Hadidi

Abstract: This project was part of a course on Power System Protection (ECE 8240) at Clemson University. Under Frequency Load shedding is the last protective scheme of any power system to prevent blackout. Frequency of any conventional bulk power system with rotating electrical machines can be determined by the rotor speed of the generators. Any sudden load change in the system will cause a temporary change in rotor speed of generators and system frequency as per the swing equations. An under frequency load shedding scheme has been implemented based on rate of change of frequency of the system. An efficient power deficit calculation method has been presented. A multi-step load shedding scheme based on rate of change of frequency has been implemented. Load shedding steps have been adjusted to consider primary frequency response of the generators. System is modeled in MATLAB and analyzed using ODE solvers.

DISTRIBUTION SYSTEM MODELING IN EMTP SOFTWARE, SYSTEM ANALYSIS, DISTRIBUTED GENERATION INTEGRATION STUDY AND COST ANALYSIS

Instructor: Dr. Elham Makram

Abstract: This project was part of a course on Distribution System Engineering (ECE 8160) at Clemson University. A 4.16 kV radial, unbalanced distribution system is model in PSCAD with appropriate conductor type as given is system data. Based on power flow study, solution for voltage and power factor improvements are suggested. Type 1 SCIG based Wind Generator is integrated with the system and its impact on system steady state performance is analyzed. As per the material and labor cost provided, return on investment of DG installation has been calculated.

DYNAMIC PHASOR MODEL OF PHOTOVOLTAIC ENERGY SYSTEM

Abstract: This project was part of internship project deliverable at Argonne National Laboratory. Power system dynamics consists of fast and slow time scale dynamics. In electromagnetic transient program (EMTP) power system dynamics for fast time scale (electromagnetic transients) are modeled along with slow electromechanical dynamics. Dynamic equations in EMTPs are solved using numeric integration techniques. Any periodic electrical quantity of power system can be expressed as Fourier series. For dynamic phasor modeling of the system, instantaneous signal is approximated as significant Fourier coefficients which approximates original signal. Dynamic phasor modeling helps improve the computational efficiency of the differential and algebraic equation model with satisfactory accuracy.

TEACHING

TEACHING ASSISTANT: IIT DELHI : JULY, 2011 - JULY, 2013

Tutored undergrad students in effective lab techniques for productive results during laboratory sessions on Power Engineering Lab. (EEP 303), Electrical Machines Lab. (EEP 203), Fundamental of Electrical Engineering (EEL 101), Principle of Electrical Engineering (EEL 102) and Power System Dynamics (EEP 798).

TEACHING ASSISTANT: CLEMSON UNIVERSITY

Responsibilities for teaching assistant for Power System Transients (ECE 8170, TA for Fall 2016, Spring 2019) included grading and solving analytic problems on power system transients for the class, also help the instructor to give necessary technical support on EMTP tools. I helped instructor on grading and updating analytic problem assignments on Power System Stability (ECE 8630) course for Spring 2018. I was also grader assistant for Digital Signal Processing (ECE 8440) course for Spring 2017.
